

Featurama

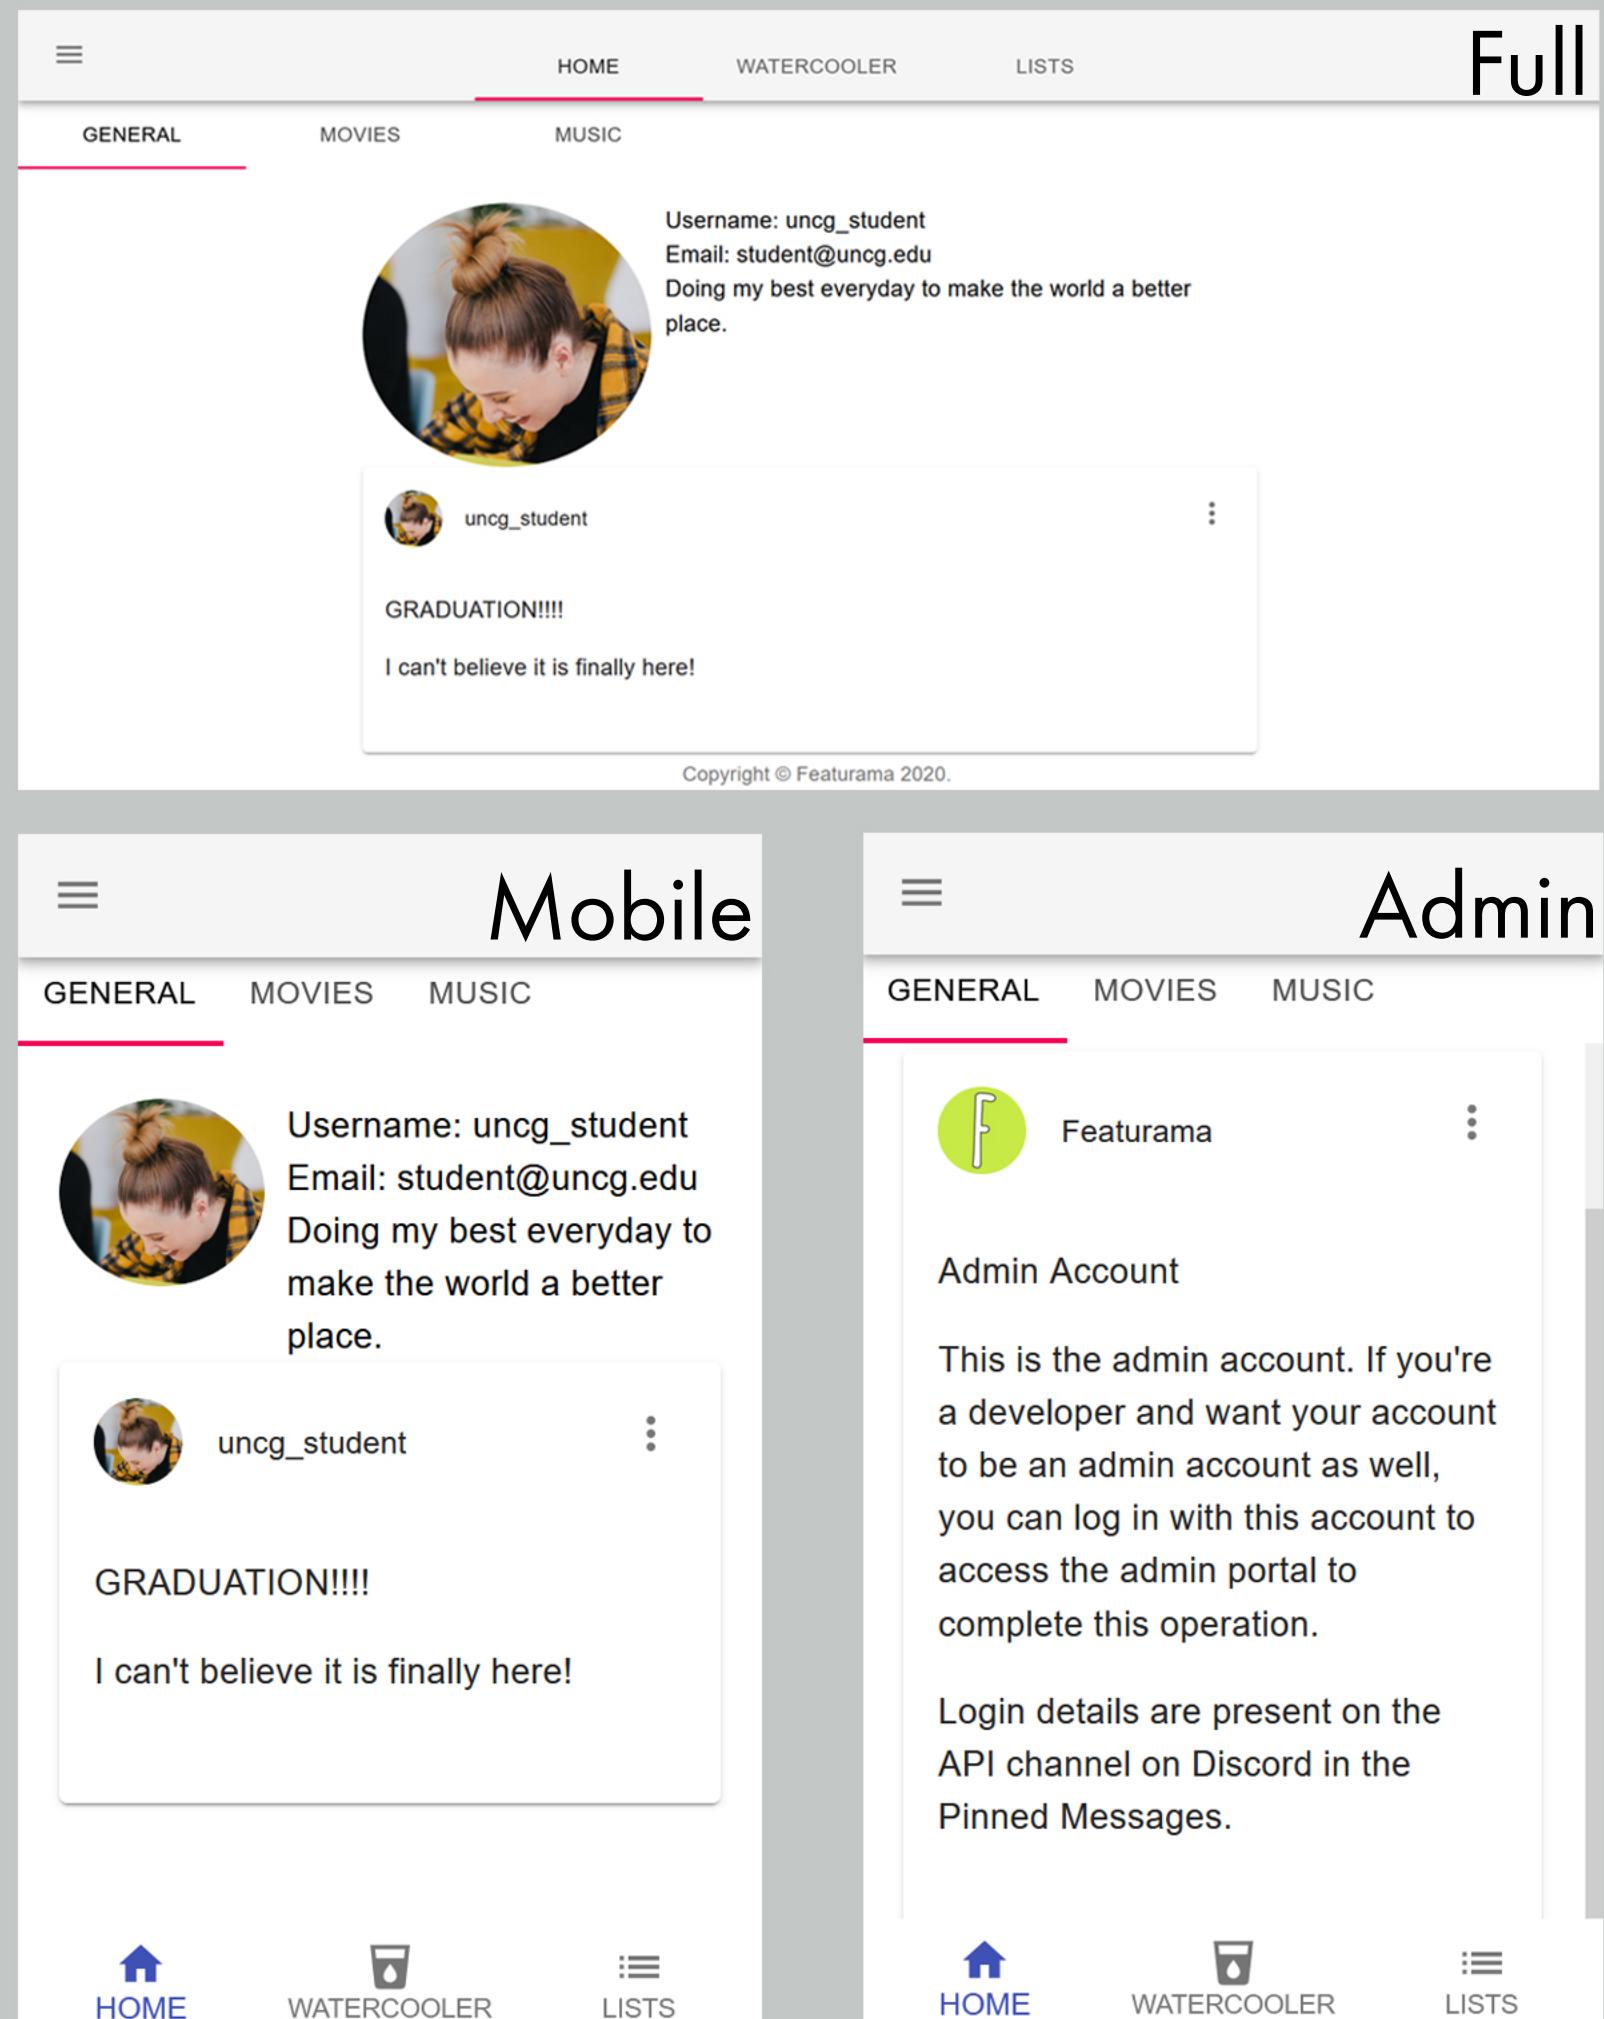

Ioannis Batsios • Michael McCulloch • Christopher Thacker • Hieu Vo • Jamie Weathers

Featurama is a social media application. It marries the social aspects of Facebook with the focused interests of Pinterest.
No more _____, no more _____, and no more _____. Only you.

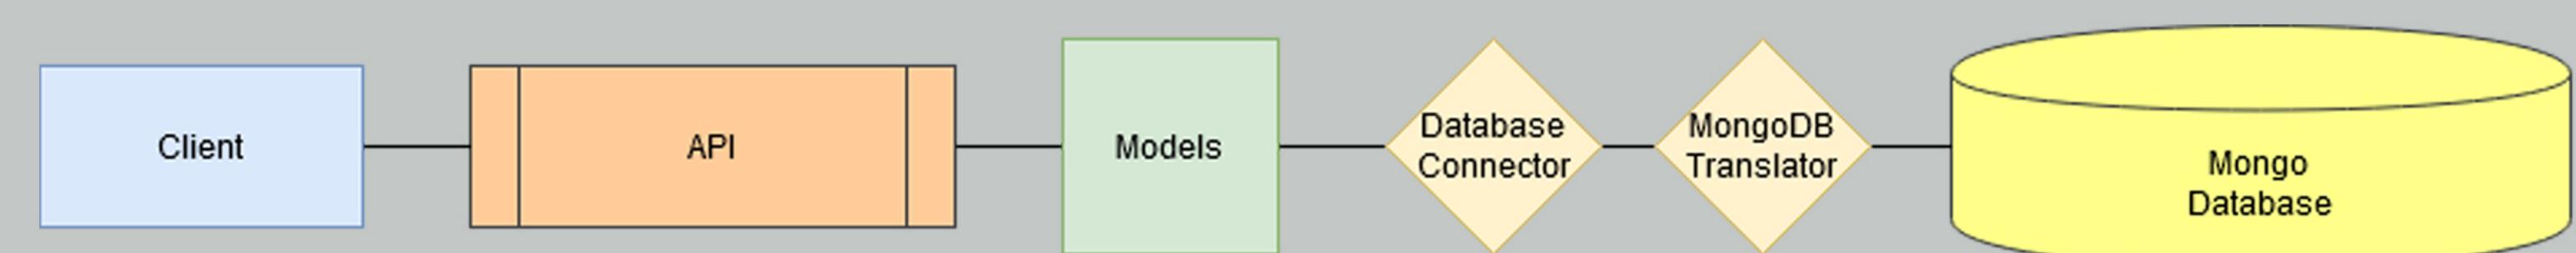

Front End

The front end was designed with a focus on simplicity and cleanliness. We used React with Material UI components. The front end was also designed to work across all major browsers and responsive to work across multiple devices.

Back End

The back end was designed using Express architecture and connected to MongoDB. We implemented a database translator class to quickly change or upgrade databases if needed.

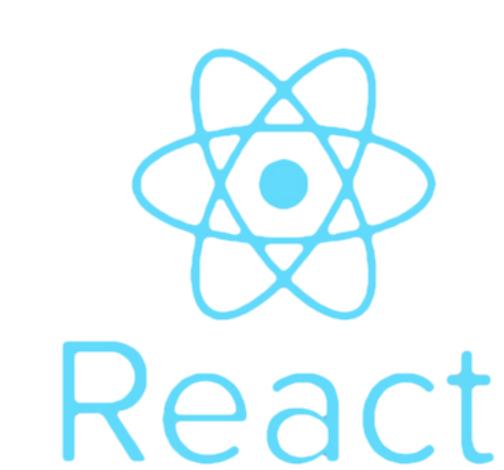

Admin Portal

To remove those pesky trolls, we implemented an administrator portal to quickly remove insensitive content and users.
